

When to go for funding and when not

There are many reasons to participate in a project with other organisations, and jointly engage in research and development activities. But then again, there are also reasons against.

So, why would you consider to go for a collaborative project ?

Your profile

You are either

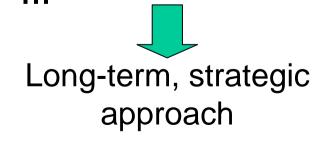

- an academic institution, or
- a developing company (e.g. software, hardware), *or*
- an 'end user' (e.g. a manufacturer, a utility, a museum)

Pro and Contra

PRO

- Substantial Funding
- Lower risk for new developments
- Profit from research partners
- Build new markets with the partners

CONTRA

- 'Time to market' very long (> 3 years)
- Competitors within the project

Pro and Contra

- As an academic institution you can only win
- As an IT company you can
 - engage in strategic development
 - create new markets
- As an end user you can learn about new solutions
