**Nicolai ILIUHA**

## What types of tasks (Applications) can be run on a usual multi-core computer (desktop or notebook)?

**Sequential Application** - application runs on one computer and it's run time (wall time) depends on the capacity of the computer

**Parallel Application** – Application runs on all cores of one processor

**Distributed Application** (parametric sweep) – the same Application runs on several cores with different input parameters

**Task flow** – several tasks (perhaps one and the same program with different inputs) are run in sequence

HP-SEE

High-Performance Computing Infrastructure  
for South East Europe's Research Communities

**Server**

**Server (hardware)** is a computer, dedicated to performing any service tasks without direct human intervention.

Servers are distinguished from a group of personal computers or from a group of specialized computer equipment.

# Access to regional High Performance Computing (HPC) resources

HP-SEE

High-Performance Computing Infrastructure  
for South East Europe's Research Communities

A **cluster** is a group of computers connected by high-speed communication channels (1-2 Gbit/s) and representing, from a user's point of view, a single hardware resource.

## How is the GRID forms ? What GRID gives to users?

NGI\_MD Total number of jobs by VO and DATE.

ALL VOs. March 2012 - May 2012.

The following table lists the sites that have not published accounting data to GOC during the last 3 months. This probably indicates a major problem in the accounting system of the site so listed sites are encouraged to take the appropriate measures to correct it.

### sites NOT publishing accounting data to GOC in the last 3 months

Region	Sites
--------	-------

The following table shows the distribution of Total number of jobs grouped by VO and DATE.

### Total number of jobs run by VO and DATE

VO	Mar 12	Apr 12	May 12	Total	%
atlas	0	3	5	8	0.26%
biomed	129	449	139	717	23.33%
dteam	1	0	0	1	0.03%
mdgrid	10	0	0	10	0.33%
ops	286	700	1,351	2,337	76.05%
<b>Total</b>	<b>426</b>	<b>1,152</b>	<b>1,495</b>	<b>3,073</b>	
<b>Percentage</b>	<b>13.86%</b>	<b>37.49%</b>	<b>48.65%</b>		

[Click here for a CSV dump of this table](#)

## What types of tasks (Applications) can be run on a High Performance Resources ?

**Sequential Application** - application runs on one computer and it's run time (wall time) depends on the capacity of the computer

**Parallel Application** – Application runs on all cores of one processor or on multiply processors (cores) of one or more computers

**Distributed Application** (parametric sweep) – the same Application runs on several cores on one or more computers.

**Task flow** – several tasks (perhaps one and the same program with different inputs) are run in sequence (automatically)

## How the application should be prepared to run on a High Performance Resources ?

- No user interface — computing part only
- The application must be debugged - should work without error.
- It is necessary to make an executable module - the application must be compiled on Linux or Windows.
- It is advisable to calculate how much the application need computing time and other resources

## High-Performance Computing Infrastructure for South East Europe's Research Communities

The aim of the **HP-SEE** project - combine existing and developed in the region **HPC**-resources in a single infrastructure.

For participating countries without their **HPC**-resources to provide access to these resources in virtual research organizations in the areas of computational physics, chemistry and life sciences.

Project started in 2010. Project duration - 3 years.

The project involves 14 countries.

**RENAM** and **IMI ASM** participate in the project from the Republic of Moldova.

# Access to regional High Performance Computing (HPC) resources

HP-SEE

High-Performance Computing Infrastructure  
for South East Europe's Research Communities

**HP-SEE** project brings together 14 partners from the South-East European region, more than 10 institutions involved in the project as third parties...

1. **Greece** Greek Research & Technology Network
2. **Bulgaria** Institute for Parallel Processing, Bulgarian Academy of Sciences
3. **Romania** "Horia Hulubei" National Institute of Research and Development for Physics and Nuclear Engineering
4. **Turkey**
5. **Hungary** National Information Infrastructure Development Office
6. **Serbia** Institute of Physics Belgrade
7. **Albania**
8. **Bosnia and Herzegovina**
9. **Former Yugoslav Republic of Macedonia** SS. Cyril & Methodius University of Skopje
10. **Montenegro**
11. **Moldova (Republic of)**
12. **Armenia**

HP-SEE

High-Performance Computing Infrastructure  
for South East Europe's Research Communities

**HPCG cluster** located at ICT of Bulgarian Academy of Sciences.  
576 computing cores. The storage and management nodes have 128 cores.

Number of nodes	36
CPU	Intel Xeon X5560 @2.8Ghz
RAM	24GB per node
Max number of parallel processes	576
Interconnect type	DDR Infiniband
Interconnect latency	2.5 $\mu$ s
Interconnect bandwidth	20Gbps
Peak performance (Tflops, double precision)	3.23
Achieved performance (Tflops, double precision)	3
Operating system	Scientific Linux 5.3 64 bit
Batch system	torque + maui

## **EGI-InSPIRE** - European Grid Initiative:

Integrated Sustainable Pan-European Infrastructure for Researchers in Europe.

Supports „grids“ of high-performance computing (HPC) and high-throughput computing (HTC) resources

Supports integration into a seamless production infrastructure of new Distributed Computing Infrastructures (clouds, supercomputing networks and desktop grids)

Continued support for current heavy users of the infrastructure in earth science, astronomy and astrophysics, fusion, computational chemistry and materials science technology, life sciences and high energy physics as they move to sustainable support models for their own communities

A 4-year project, started in 2010

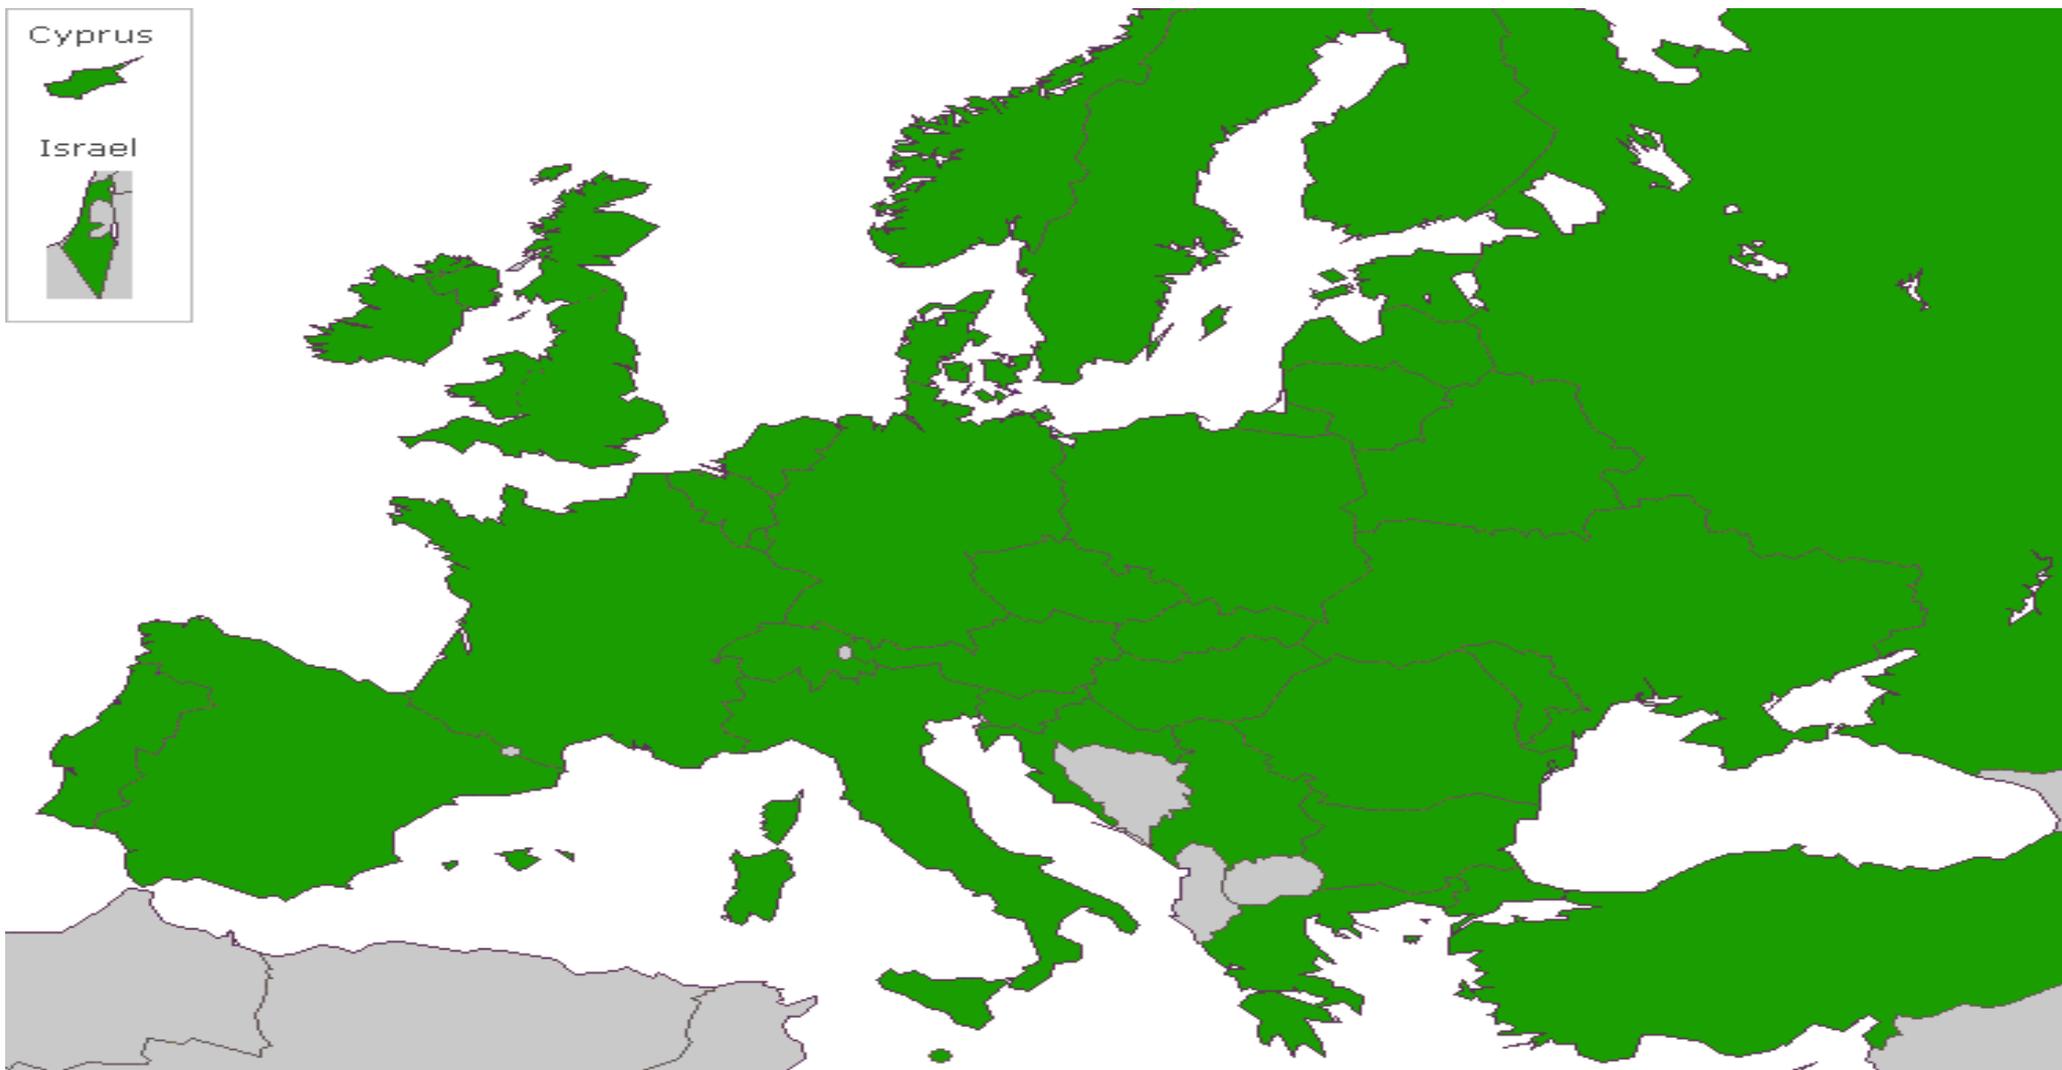

Many countries have launched National Grid Initiatives (**NGI**) to establish National grid infrastructures.

**MD-Grid — National Grid Initiative** of Moldova was officially inaugurated on the plenary session of RENAM "Users Conference – 2007" on **May, 14 2007**

Now the **European Grid Initiative (EGI)** is an organisation being developed to coordinate the European Grid Infrastructure, based on the federation of individual **National Grid Initiatives (NGI)**, to support a multi-disciplinary user community.

**EGI** will unite the National Grid-organisations of Europe.

**NGI** from **37** countries (coloured in green) are partners in **EGI-InSPIRE** Project

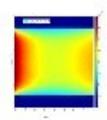

## Задачи и цели EGI:

- Гарантировать долговременную устойчивость европейской e-инфраструктуры;
- Координировать интеграцию и взаимодействие между Национальными Grid Инфраструктурами;
- Создать общеевропейскую производительную грид-инфраструктуру для широкого спектра научных дисциплин на основе Национальных Grid Инфраструктур;
- Интегрировать, тестировать, утверждать и формировать, делать широкодоступным программное обеспечение от ведущих проектов по разработке и развитию Grid ПО;
- Создавать документацию и обучающие материалы по ПО и работе с ним (Национальные Grid организации обеспечат их перевод на соответствующий язык);
- Связать европейскую инфраструктуру с аналогичными инфраструктурами во всем мире;
- Тесно сотрудничать с индустриальными, технологическими и сервисными поставщиками, а также с пользователями Grid для обеспечения быстрого и успешного понимания и внедрения Grid-технологий в европейскую промышленность.
